

Intensive Course

Humanitarian Water Engineering

York University, Toronto, Canada

- What** The Humanitarian Water Engineering Intensive Course is an opportunity to acquire technical knowledge and skills in water engineering for humanitarian response. Participants learn the fundamentals of theory and practice of getting safe water from source to users in humanitarian crises.
- How** Learning occurs through problem-based learning, curated online reading modules, and expert facilitation. Participants will collaboratively design a safe water supply intervention strategy at the Kutupalong-Balukhali refugee camp in Cox's Bazaar, Bangladesh.
- Who** Expressions of Interest are encouraged from professionals and graduate students with diverse disciplinary and experiential backgrounds looking to enter humanitarian field work. The most important qualification is a clear and demonstrated interest in and capacity to advance your technical skillset for work in humanitarian response.
- When** The current COVID-19 pandemic brings urgent attention to the need for skilled humanitarian responders at the same time that it acts as a barrier to in-person professional development programs. The Dahdaleh Institute therefore calls for Expressions of Interest, so that we can all move forward appropriately as the situation develops.

Course Leadership

Syed Imran Ali, PhD.
Research Fellow, Global Health and Humanitarianism, Dahdaleh Institute for Global Health Research

Prof. James Orbinski
OC, MSc, BSc, MD, MA, MCFP
Director, Dahdaleh Institute for Global Health Research

Prof. Satinder Kaur Brar, PhD
James and Joanne Love Chair in Environmental Engineering, Lassonde School of Engineering

Prof. Ali Asgary, PhD
Associate Director, Advanced Disaster, Emergency and Rapid Response Simulation

Matthew Arnold, MSc.
Hydrogeologist & Water Resource Specialist, Dahdaleh Institute for Global Health Research
